Difficult Part:

The most difficult part of the assignment for me was decoupling with dependency inversion. I tried looking through the lecture notes for a definition and an example. From what I could tell, this meant that the high level classes can not depend on the lower classes. From this definition, I got a vague understanding of what to do but I did not understand fully and tried contacting the professor for further clarification.

Assignment Status: Complete

Lines of Code: 80
Lines of Code in unit tests: 77
Unit Test Coverage was measured by: Jacoco for Java
Cyclomatic Complexity: 26

Other:
There will be no Coverage on edu.iit.cs445.spring22 because it only contains the main class. The main class contains no methods. I just tests and prints the methods created by other classes.
